

## **ABSTRACT OF THE DISCLOSURE**

2  
3        The invention is a method, a computer readable medium and a system for improving  
4 performance of a graphical user interface (GUI). In one respect, the invention is a method for  
5 improving performance of a GUI. The method comprises identifying a plurality of links,  
6 wherein the identifying is performed in response to an initiation command. The method  
7 further comprises automatically processing the plurality of links, with each link being  
8 processed individually. In another respect, the invention is a computer readable medium on  
9 which is embedded computer software comprising a set of instructions for executing the  
10 above method. In yet another respect, the invention is a system configured to perform the  
11 above method.
